

Trading123 AutoTrader User Manual for NinjaTrader

Here is the current version of the Trading123 Autotrader Software N8V5. You should be using the latest build of NinjaTrader with our Software. As it is programmed in the latest build, so for best results, download the most current version. <https://www.ninjatrader.com>

Traders, thank you for your purchase of the Trading123 Auto Trader software. You should review this manual as often as necessary until you fully understand all aspects of the trading software. From setting it up to running the Strategy within the NinjaTrader platform, you must be comfortable with how it all works before you attempt to trade live with your trading account. There is at least a 2-4 week learning curve based on your knowledge of the market.

Ensure you have a complete understanding of how to start the Strategy, disable it, exit a trade manually if necessary, cancel a trade, or restart the Strategy. We suggest you trade within the simulation mode for at least two to four weeks to understand how it works. You will need to spend some time with the Software to learn, watch the videos, and watch it in action. We are providing you with an education on how the market works and market timing. This Software, if used correctly, could change your trading career. Any questions, contact us by email: trading123net@yahoo.com. We respond to all emails within 24 hours, except on holidays or weekends, and provide excellent customer support.

Trading123 Software User Agreement & Disclaimer read and review and understand the following disclaimers: By installing the Software you agree to be bound by the terms of this Agreement.

1. **License:** If you have purchased a license to the Software, Trading123 grants you a nonexclusive right and license to the Software and the related documentation such as this manual and the indicator manuals and all videos to use the Software. You are granted two licenses to use the Software on any two computers. You may not make any further copies of the documentation. You own the media on which the Software is recorded, but not the Software itself or any copy of it.
2. **Copying, Transferring or Modifying the Software:** The Trading123 Software contains copyrighted material, trade secrets and other intellectual property. You are the only licensed one to use the Software, with the software license. The Software is protected by this license and you may not decompile, reverse engineer or post any pictures of the Software in any public or private forums. You may not modify, translate, rent, lease or lend the Software, and you may not sell to others the right to use the Trading123 AutoTrader Software. With the license agreement you agree to not copy, transfer, transmit, sublicense or assign the license to anyone.

3. **Warranty Disclaimers:** The Software and documentation are provided "AS IS" and without warranties of any kind, express, statutory or implied including but not limited to, the implied warranties of merchantability, fitness for a particular purpose and non-infringement. The entire risk as to the quality of performance of the Trading123 AutoTrader software and the documentation provided is with you.

4. **Entire Agreement:** This Agreement is between you and Trading123.Net and supersedes all prior agreements, oral or written. If you have any questions concerning this Agreement, you may contact us at our email address of: trading123net@yahoo.com

U.S. Government Required Disclaimer - Commodity Futures Trading Commission Futures and Options trading has large potential rewards, but also significant potential risk. You must be aware of the risks and be willing to accept them to invest in the futures and options markets. Don't trade with money you can't afford to lose. First off, there are no guarantees with this Software; you have to spend the time to learn how to use the Software as it is very advanced. Markets go through cycles monthly, so a choppy, low volume market will yield different results than a market that is trending and breaking out to new highs or lows. Trading premarket or in the evening with futures involves more risk due to a light volume. The best results for the auto trader are during regular market hours, starting at 9:30 am Eastern time until the market's close at 4:00 pm. This is not a black box system.

Traders should note that there will be losing trades as no trading system is 100% accurate. The market is too complicated for that. The goal is to have more winning trades accumulate higher returns than the losses.

1. AutoTrend Line
2. Crude Open or Open Indicator
3. Volume Delta Pro
4. Fibonacci, Opening Range Breakout or ORB
5. Market Cycle Pro , Moving Average, Squeeze
6. Renko Bars
7. Trailing Stops, TrendLine, Zones, Watermark

Getting Started:

Most new traders think the market works the same each day, which is not true. Well, this is where education comes into play – every chart leaves a footprint of history, and in Trading, history repeats itself. Now, I narrow the market down to days of the week. Mondays and Fridays are typically low volume days, and the market may be choppy. The volume picks up the other three days of the week, with Thursday being the best day to trade as far as I have seen over the past eighteen years.

Thursdays are usually high-volume days, with significant trading firms putting their capital to work. Also, I have found that volume picks up on the first Monday of the month, as this is when mutual funds put new money to work. On low volume, choppy days like Mondays, Emini Futures

can be choppy and light volume. No auto trader in the world can trade a choppy market, so if there are no breakouts above the previous day's highs or lows in the first two hours of Trading, expect a tight low volume range. The best way to trade with the auto trader on days like this is to start or stop the auto trader at new highs or lows. Then once the trend changes, it will catch the next move. However, if the trading range (highs to lows) is small or tight (8 to 12 ticks or 2 to 3 points) don't expect big profits. You can only take what the market will give you, so you set smaller profit goals. During the summer months, this is typical; the volume is light, ranges are tight unless the news is moving the markets. And President Trump has kept the markets quite active.

Any results of **past performances** do not **guarantee future gains**. I make no promises or guarantees on the amount of income you can make from this Software on a daily, weekly, or monthly basis. When you open an account with your broker, they make no guarantees that you won't lose money. As a trader, you are in control of your profits. All times shown are **Eastern Time Zone**.

With this Software you can have it on as many charts as you wish, there are no restrictions. Just add the Strategy to any chart you Trading. The program itself doesn't use much memory; any computer less than two years old should have enough memory for it to work.

Should you ever have an issue with the Software, we ask that you send us a screenshot of the issue you are having. The Software is hardcoded, so there really shouldn't be any issues, as it wouldn't have imported into NinjaTrader is there was a bug or a glitch. These are built-in security measures that are in NinjaTrader.

Important Note: NinjaTrader must be running and connected to your brokers account for the Strategy to trade. The Strategy will not load unless connected to a data feed.

N8 of the Auto Trader Improvements: We updated the Software in October of 2020 and May of 2021 and added a breakeven button to the Strategy. It now uses unmanaged orders and a new framework for order handling. This is what works behind the scenes in controlling your orders and should prevent any order from overfills. We have added chart buttons that allow you

to trade off the chart just like Chart Trader, turn the Strategy on and off, or close out the trade while still running the Strategy. You now have the ability to make only long trades or only short trades. You can trade with all types of charts, including minute, range, or Renko. This is a significant improvement as with Renko charts you get a better trend which means longer trades, more profits, and less chop. We have added a trailing stop with a breakeven feature. Trade up to 3 entries, with the third being a runner so it catches the full trend. We are using the Trading123 Renko Bars now with the Software; this has improved the Strategy, but you can use any Renko bars you have or chart type. Remember, Renko bars are not an indicator. 11/21 we updated the Algorithm for longer trends.

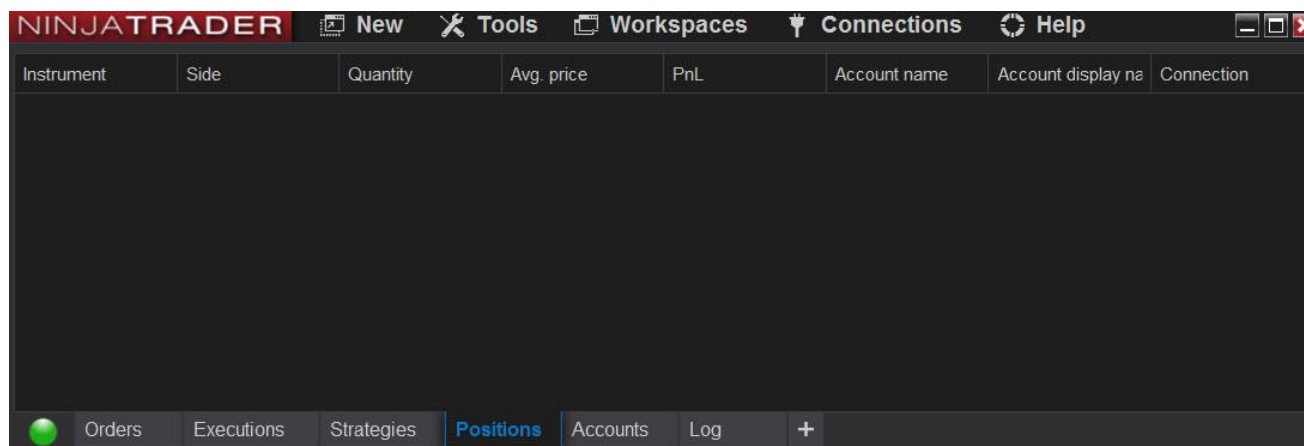

Dimension Software: As a trader, you need to synchronize your computer clock with this Software. This is a free download, and the Software runs in the background in the system tray. This will confirm timely entries into the market, as imagine if your clock was wrong and you input at order and got a bad fill. Go to this link to download and synchronize your computer's clock: <http://www.thinkman.com/>

2. Installing the Software:

Downloading the file: You should get an email that says "Trading123 AutoTrader Download" In that email is a link to our cloud server. Click that Link or copy and paste it in your browser, this will take you to our cloud server. There is also a link to download it on page 7 of this manual.

Once there the folder should contain a file called **Trading123AutoTraderN8V5.zip** Currently this is the file you have to import into NinjaTrader. See the Link on page 8.

How to Install the Autotrader and Indicators into NinjaTrader 8: The image below is the control center, to bring this up. Right click on the Tools tab at the top, select Import, then Ninjascript Add On, pop up window appears and you will see your downloads or documents folder. Or where you saved it, select the zip file and then import into NinjaTrader; when finished a pop up window will appear and say it was imported successfully. Then restart the computer for it to register.

Watch this video on how to import a file into NinjaTrader 8 if you don't understand how to import it manually. You have to import the complete zip file; do not try to copy and paste it into NinjaTrader that will not work. That's why you need to watch the video.

<https://www.youtube.com/watch?v=6Rshaguo1Q8>

3. Autotrader Download link for NinjaTrader 8

<https://ln5.sync.com/dl/9dd994440/vsgmzc2n-zk29gpkd-hejz72mf-cfmsw8k5>

In this link you will find the latest update AutoTrader software. Software is usually updated 3 to 4 times a year to work with the new builds of NinjaTrader. In the folder you will find the Trading123AutoTraderN8V5.zip file this is the Autotrader file. This is the file you need to import into Ninjatrader. The manuals are also there along with 4 template files for trading the NQ and CL. You can add this to Ninjatrader as a template and use them for your Trading. And adjust the profits and targets to your trading style.

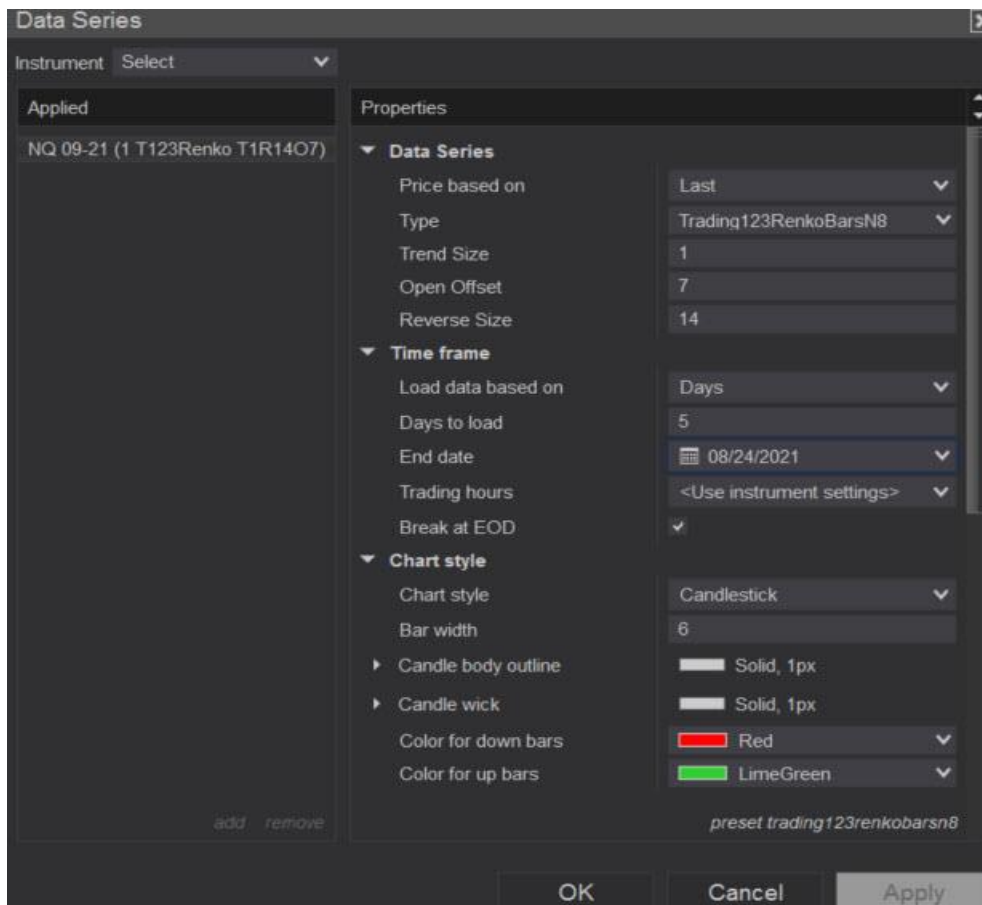

Once you have downloaded and installed both the indicators and the Autotrader, be sure to restart the computer. It is necessary to register the indicators and Strategy within the platform and verifies your license.

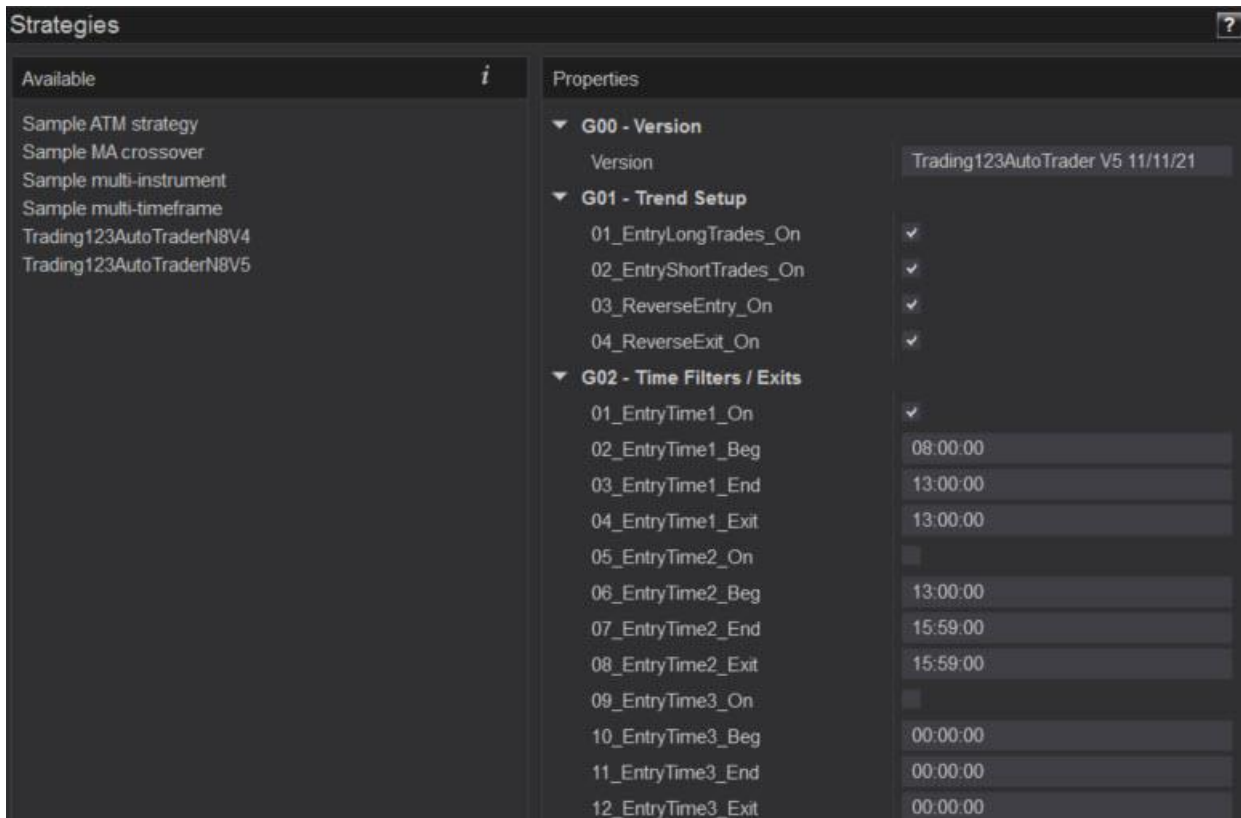

On the next page is an example of the indicators in the folder in the indicator list. For some reason, if you get an error that an indicator or Strategy is not licensed. Just email a copy of the error, and we will double-check the database and get it updated.

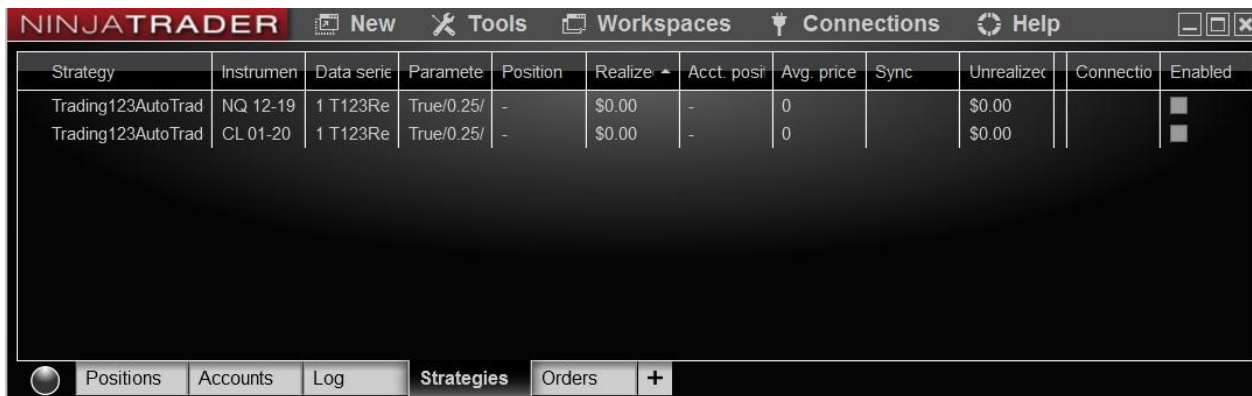

Installing the Strategy:

Chart Data Series: Right-click on the chart that you want to put the autotrader on. The data series box appears select data series. It will take you to this screen. In the time frame setting make sure you have 5 days of data loaded so the Software can analyze the charts. And this is also where you Setup the Renko Bars for what you're Trading. In the example below were trading the NQ with a Renko setting if 1, 7, and 14.

4. Add the Strategy to a Chart: To add a strategy to the chart right click on the chart you want the Strategy on. A pop-up box appears, and select Strategy and the Strategy box above appears. There will be a list of Strategies to select the **Trading123AutoTraderN8V5** Strategy by clicking on it with your mouse till it is highlighted blue. Then click the add button at the bottom of the configured box, and it will place the Strategy in the box below the strategy list. Then click the Apply button on the right to load it and then OK button to add it to the chart. Then look at the chart and the Strategy is now loaded when the Strategy appears in the left upper corner of the chart and will say Trading123AutoTraderN8V5. You are now ready to use the Strategy. There will be no buttons or colored background on it yet until you enable the Strategy.

Control Center: This is the control center once you have loaded the Strategy go to the control center as shown above and that's what it will look like once the Strategy is loaded on the chart. And you can have more than one Strategy loaded as the image shows we have the NQ and CL strategy loaded one on each chart.

Strategy	Instrument	Data series	Position	Realized
Trading123AutoTraderN8V3B	CL 09-21	1 T123Renk	-	\$596.96
Trading123AutoTraderN8V3B	NQ 09-21	1 T123Renk	-	\$613.36

Navigation bar: Orders, Executions, **Strategies**, Positions, Accounts, Log

When the Strategy its highlighted green it means it's active and looking for trades like the picture above. This happens when you click the enable button. If the Strategy is unenabled, the box will be white like shown in the control center picture above on the CL strategy. To edit the Strategy, you must untenable the checkbox to edit it by clicking in it with your mouse. The green button in the lower left-hand corner means I am connected to my brokers data feed and ready to trade. If it's yellow or black, you're not connected. You must be connected to data feed for the Software to work.

5. Strategy Setup Videos & Settings: This a must view, these videos explain how to get started with setting up the Strategy. You must watch these videos to learn to setup the Autotrader.

<https://ln4.sync.com/dl/6f0e21780/sr88xepm-nwuduvs3-vbjniutb-692t34xd>

Watch the videos in this folder on setting up the Strategy. There are four videos that explain in detail setting up the Strategy for NQ, CL and ES. And another video called Renko Bars Setup to watch and learn on how to set them up. Crude Strategy Setup video explains how to setup the Strategy, add it to the chart and then set up the profit targets, trail stop, stops, profit and loss goal. So be sure to watch this first one as it covers everything. How to enable the Strategy, edit it and enable it for Trading. The NQ is the longest of the videos and covers all that's in the crude video and more, so be sure to watch this. Then the ES Strategy Setup covers setting the ES to run with the Autotrader. Now in setting up the Autotrader, you will have to adjust the contracts and profits to your trading style as every trader is different.

The image above is what the Strategy should look like once you enable it. In the upper left-hand corner should have the strategy name. The name may change with updates, but when you download it, you are getting the most current version. The buttons will be on the chart, and in the left lower corner, you have the data box. Note: The Strategy should only be loaded once; if you load it twice on a chart, it will not function correctly. So always double-check your settings each day. And we have the Trading123 Watermark on there to show the Renko settings.

Now the data box shows the following, C3 means your Trading three contracts. S15 is the stop were using, G500 is the profit goal for the Strategy. L360 is the loss goal, then you have the date, the number of trades it did, win % and PnL is for profit and loss. Then you have the color-coded background for the trend, the Trading123 logo that is on the chart is not included. And over on the right, you have a gold-colored vertical line, this shows were you started the Software. If the chart doesn't look like the one above and something is missing, it's best to shut down NinjaTrader and restart your computer as something didn't load correctly in NinjaTrader.

This is an image of a chart after the Strategy hit its max gain goal and plots the green vertical line on the chart. The Trading Halted: Max Daily Gain Trading123 also appears once the max gain goal is hit. We set a **L360** is for the max loss **G800** max gain goal, and **S22** is the stop. The chart shows the date the Strategy was run. The Autotrader ran and had 6 trades 100%-win rate trading 3 contracts max goal was hit. And on this chart were using the trail stop which is the red hash marks underneath the Renko Bars. I will cover more on this in the videos and the settings. Not all trades will not be 100%-win rate. And there can and will be some slippage on the max gain or loss due to market conditions, but it is always very small.

6. AutoTrader & Indicator Manuals link:

<https://ln2.sync.com/dl/8a288ea70#5m8x2vjg-76qubd72-47f57ekf-kjh3j3zx>

The indicator manuals are also at this link, and there are manuals for the following indicators: AutoTrendline, Crude Open, Market Cycle, Market Delta Pro, Fibonacci, Moving Average, Renko Bars, Opening Range Breakout, Trailing Stops, Squeeze, Watermark, Trend line and Zones. Some indicators don't have a manual and will have a video. You will also find these manuals here: Market Timing Rules, and Trading123 Money Management. So be sure to review all of them. On

page 19 you can download the individual indicators, along with the manuals and videos on using the Software.

AutoTrader manuals for the indicators and Autotrader are all pdf files and will require Adobe reader which is a free download at this Link: <https://acrobat.adobe.com/us/en/acrobat/pdf-reader.html> New updated indicators for recent N8 build can be downloaded on page 22. The indicators will all now be in a folder at the top of the indicator list called Trading123, as shown earlier. They are no longer listed in alphabetical order. In the folder, they are much easier and quicker to find.

7. Renko Bars

We like to use a 1, 6 and 10 Renko setting, in Trading Futures, like NQ, ES, GC and YM. Crude oil we use a 1, 4 and 6 setting. I would test the different settings, to see what works for your trading style. The higher the last number the longer the trend. In fast wide range markets, you could use a 1,6 and 12, or a 1, 7 and 14 or 1, 10 and 20. Each trader is different so you will have to try the higher settings to see what works for you. In slower markets I would use the 1,6 and 10, which we use 90% of the time. They take some time to get used to, but are far more accurate than minute charts, range or tick charts. Watch the video that was in the download link on Renko bars called RenkoBarsHowTo.mp4, and I will explain more on the Renko Bars. And read the updated Renko Manual for Trading in faster markets like the **Corunna Virus in April of 2020**. Faster markets require higher Renko bar settings.

Renko Video-Watch This: This Link contains the manual, video and the zip file for the Renko bars.

<https://ln2.sync.com/dl/fc00e5310/ncrt42ns-stqa5byw-tj4jirab-mhh7bsq3>

8. Crude Oil Road Map: This Link contains three videos, Trading123 Open Indicator and one manual. There is a password to access the Link below: **PW is 123CrudeTrader**

<https://ln2.sync.com/dl/0a3319ab0/h5i7ctiu-j7kaqpjr-v2epppkd-2gaezz5n>

First video in the Link is called the 30 Tick Rule watch this to learn on how we use this rule to make a decision on running the autotrader. If you use this rule it will keep you out of chop so be sure to watch the video.

Watch this video CrudeOpenIndicatorVideo.mp4 on how to use this indicator if you trade Crude Oil.

This is a very accurate indicator for trading crude oil as it measures overnight support and resistance. And with it, you will be able to predict where the price can move to and identify the trend. I have used this for the past 15 years and you should to, so watch the video.

And the other video is ProgramTradingCrudeOilV15.mp4 covers how crude oil moves and the price ladder and the original 20/80 rule I learned over 15 years ago. And where price reverses off the price ladder and the 20/80 rule, learn this and see the price action reverse. Better than any indicator and very accurate.

The Trading123 Crude Oil Road Map manual which is called Trading123CrudeOilRoadMap.pdf and the Trading123CrudeOpenN8.zip is the Trading123 Crude Open Indicator which is used for trading Crude Oil. From time to time, I may add new videos to this folder or others, so if you see something with a 2020 date on, then it's new.

9.How to Trade Crude Oil Setup: Watch these videos on setting up Crude Oil with AutoTrader. How to trade Crude Oil inventories and pre-market Trading analyzing the market.

<https://ln2.sync.com/dl/2db1b4c50/gvp9k7cn-b8udcxrt-jjs2spus-y8wsisiz>

10. Crude Oil 20/80 Rule: This is updated videos for 2020 that covers trading Crude Oil and the 20/80 rule as I call it. The original is in the Crude Oil Road map folder called Program Trading Crude Oil. I thought I would update with some a new video and the Crude Oil Open indicator also.

<https://ln2.sync.com/dl/4b7023010/d6ze83uk-nhx9qwzt-ju4mfpcg-ggz444w8>

11. Fibonacci's Numbers and AutoTrader: Watch the videos in this folder on how we use the fib indicator to predict price action. Timing the trades with the autotrader and fib indicator. One video on Crude Oil and other on NQ and timing your trades. Then there is the Fibonacci manual to download and review.

<https://ln2.sync.com/dl/d79c6af40/m8ea7fd6-kk29tu2t-92492ycj-k8e4z6e4>

12. Market Timing Key To Trading: Traders you need to learn about market timing and how it moves the markets. It's very powerful as the major banks and trading firms come in and put their money to work and move the market. I use this each and every day, to time the market and make trades. Review the manual and videos here.

<https://ln2.sync.com/dl/f9987bdb0/gavy8csv-yp3isxbu-tjwzn74-dceczy8r>

13. When to Trade Video: Covers when not to trade around news, Fed Meetings, congress and senate hearings. Be sure to watch this video as it's very important to know when to avoid Trading.

<https://ln2.sync.com/dl/a83d122c0#8upfnueu-mgy9ag8b-ihaguhg2-2ft6vfk6>

14. Trading123 Trade Lessons: This Link contains over 15 videos and growing on using the autotrader and the trades I did. I break it down and explain how they worked and why. So invest some time to learn how to use the autotrader and how to improve your Trading. I talk about the trail stops, and open indicator and using it with Crude oil trading. And trading with the Delta Indicator. All valuable analysis of the live trades I did that day, why they worked and what to look for.

<https://ln2.sync.com/dl/263de1bf0/c9pm5e6z-nq6thsw4-isn2hzsg-ws7fmhtj>

15. Moving Averages: We like to use the 34 and 89 and 200 EMA moving average. We will discuss these in the videos about the market cycle indicator below. So be sure to watch it at the Link below. The moving averages play a vital part in the overall trend. A simple plan is when the price is above the 200 EMA trend is up; below it is down.

Market Cycle Pro Indicator, Manual and Videos: This Link contains all the files for the Market Cycle Pro indicator. The manual, installation guide and Market Cycle How To Video on using this indicator. The video files are the mp4 files; the indicator files are the zip files, and manuals are the pdf files.

<https://ln4.sync.com/dl/4bc110210/9fz54n3r-cnclsuehi-zqifkjk9-uzng75ct>

16. NinjaTrader Education: Now, if you are new to ninjatrade, you should take advantage of some of the free education seminars they give on using their platform. They are held daily and repeat weekly so you always have a chance to learn from them on using the trading platform. For more info visit:

<http://www.ninjatrade.com/ProductEducation.php>

Product Training Videos & Live Support & Help Guides: Helpful videos to introduce you into the NinjaTrader Platform. And Link to support should you need it. Need help with NinjaTrader check out Link below. Also, connection guides for configuring and establishing a connection with the major brokers supported—link to NinjaTrader YouTube Channel and Webinars.

<http://www.ninjatrade.com/Support.php#Get-Trained>

17. Brokers & AutoTrader: Now you can use the autotrader with all significant brokers that handle futures, but ETRADE and SCOTTRADE will not work with the autotrader. When using a broker, you want someone that has fast and reliable executions and low-cost commission. And you shouldn't have to pay more than \$10 a trade. So do your research and find a broker that works for you. For a list of brokers that are approved by NinjaTrader go to the following link: <http://ninjatraderecosystem.com/Brokers.php>

18. Trading Time Frames Chart:

I use a 3 minute and 15-minute chart to monitor the overall trend. You look for a change in the trend on the 15 minute chart, and 3 minute confirms it. Like the chart below at 13:00 pm 3 minute went red followed by the 15-minute chart, and the trend was down. So this will help keep you on the right side of the trend.

This is a chart showing a 3 and 15-minute time frame to monitor the overall trend. Watch the video called 2ChartsVideo.mp4 on how to set it up and use it. It is very powerful at catching the trend changes.

Video Link: <https://ln2.sync.com/dl/226c042a0/2963gdhw-dpsufbzt-zqknkxb5-b3jzqaf3>

The chart above shows Crude Oil using the three and fifteen-minute chart you can identify support and resistance levels. Around 12:50 pm support is lost and we go lower, when you get three red candle bars in a row and support is lost time to short. Then at 13:30 pm we get 3 red candle bars again followed by green 3-minute bar. In looking at the 15-minute chart, you would go long above resistance and it moves right up to the prior support area of 52.50 and that becomes resistance so you take your gains. So now where at resistance area below the yellow line you short as support is lost and 15-minute chart is going red. Then the patterns repeat going into the last 10 minutes of trading breakout above support, which I caught for some nice gains. Study the 3 and 15 minutes charts each day in your Trading. It will take some time to learn and adjust to it, but it works well.

19. Using NinjaTrader: The most important thing you can do each day is start with a freshly started computer. Do not leave your computer on for days, and this will use up your system resources and memory and then NinjaTrader will crash. There is no need to leave the computer on for days. I start each day with a freshly started computer, and trade the am session. If I trade the afternoon session, I will restart the computer during lunch break.

Trading on a wireless network is not advised. As if you lose your connection, you will be stuck in trade and lose money by the time you call the broker. So it's a good idea to trade with a wired connection. And make sure you have the phone number to your broker should you need to call them to get out of a trade.

20. NinjaTrader Requirements: Click the link below for the Minimum System Requirements

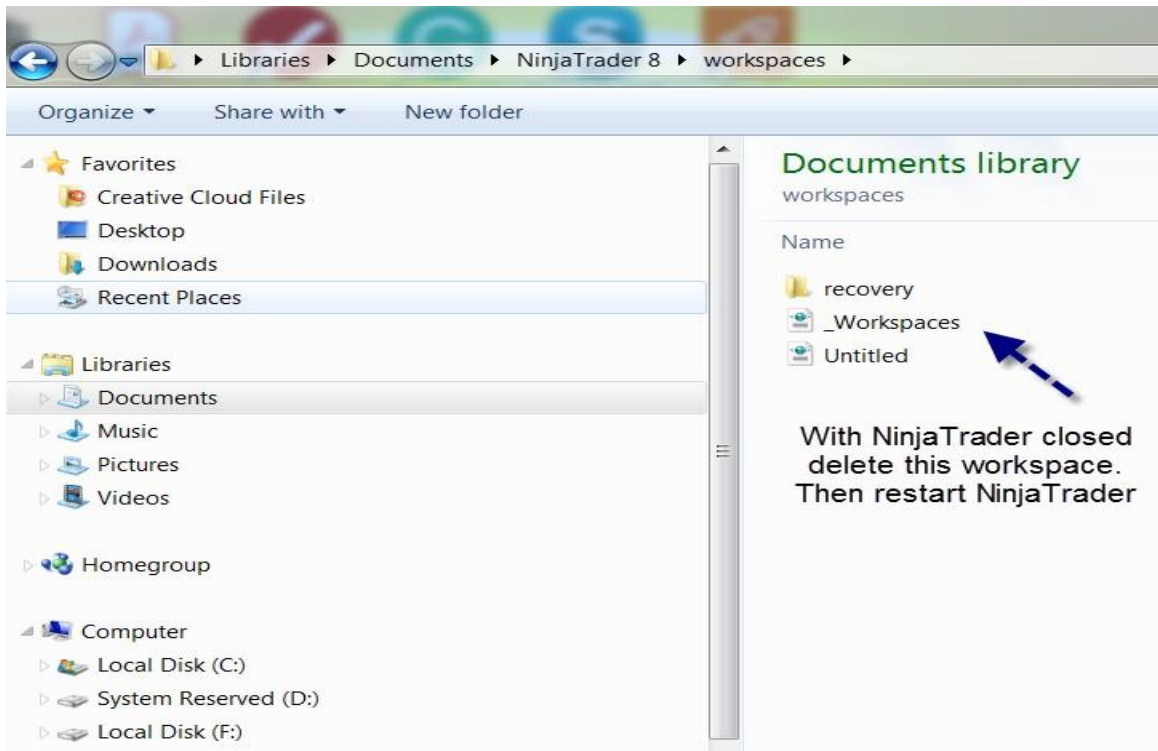

https://ninjatrader.com/support/helpGuides/nt8/?minimum_system_requirements.htm

In using NinjaTrader to trade, you cannot be using a tablet or an older computer it will just crash. I would suggest at least 8 GB of RAM, 16 GB is better 32 is best. You must have a Solid-State drive to handle all the data, and the most important thing is your Graphics Card. You must have a graphics card that is capable of handling DirectX 10, for Windows 7, and for Windows 10 a graphics card that handles DirectX 12, which comes with most newer computers. As the charts use a lot of graphics so a good graphics card is a must. And it should have at least 4 GB of Memory, with 8 GB being the best for a high top-end graphics card.

Performance Tips: Be sure to read this in using NinjaTrader; click the link below.

https://ninjatrader.com/support/helpGuides/nt8/?minimum_system_requirements.htm

21. NinjaTrader Crashes: If you experience crashes from NinjaTrader, it could be due to a corrupt workspace. If you have used the same workspace for months, it could become corrupt. So it's best to start with a new workspace on an upgrade to the latest upgrade from NinjaTrader. And if you have been using the same workspace for months and you experience lookup or crash issues. The best way to reset the workspace is go to your computer documents screen, then select NinjaTrader 8, the Workspaces and delete the workspace firm "Workspaces.xml. Then restart the computer and NinjaTrader will then make a new single workspace when launched. If you have several restored workspaces, I would do this also.

22.Database Reset: You may need to reset your database if you have an issue with NinjaTrader where you go to shut it down, and it says you have a live order left. Make sure this is in sim mode only, if live Trading call your broker. And you are having issues with NinjaTrader crashing.

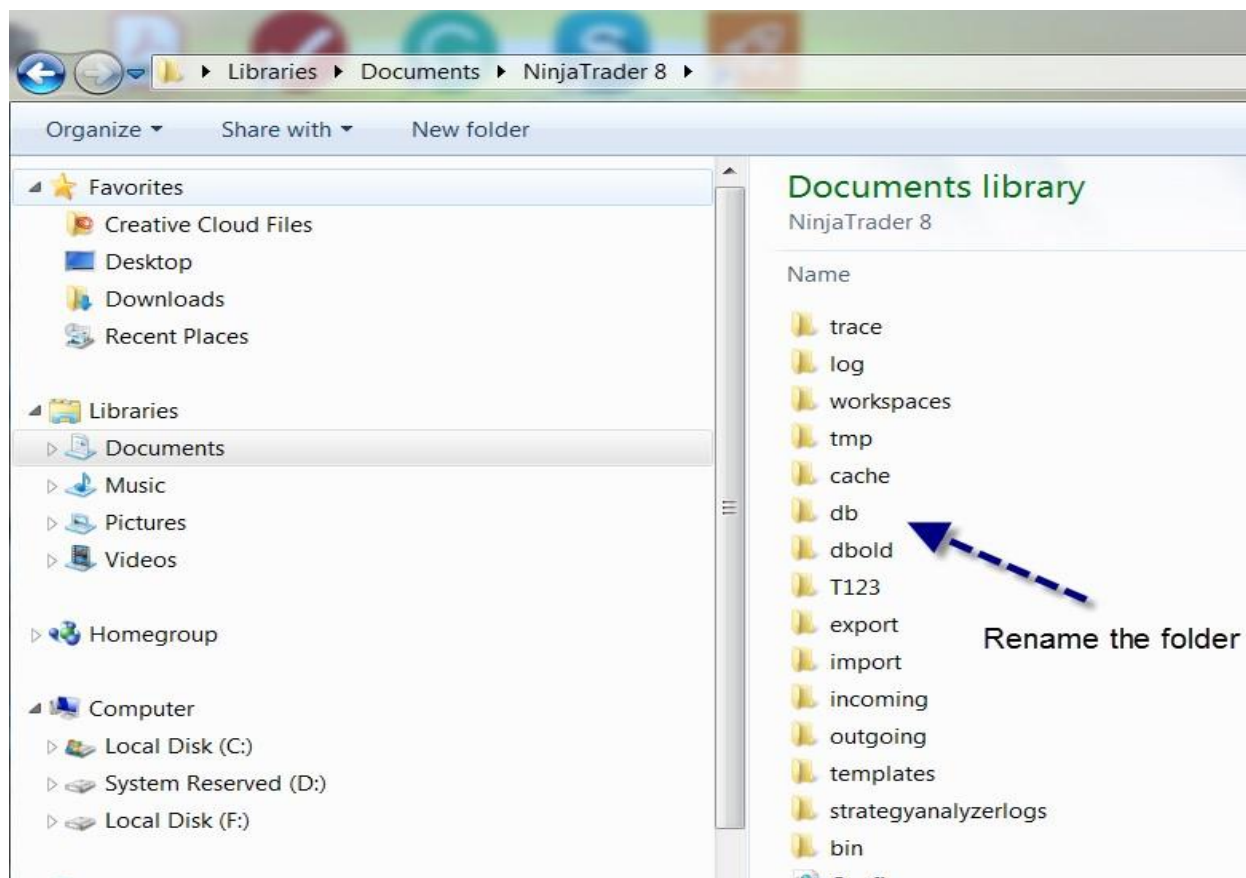

Please follow the below steps to reset your NinjaTrader database:

Shutdown NinjaTrader and Go to the Start Menu

Navigate to Documents--> NinjaTrader 8.

Rename the folder named 'db' to 'dbOLD'.

Then start up NinjaTrader, and a fresh database folder will generate.

23. New User Guide: This Link will help new traders to Ninjatrade get up and running with the NinjaTrader platform. Quick tip videos will help you learn how to get connected, create a chart, chart trader, and much more, so be sure to watch the videos if your new to NinjaTrader.

<https://ninjatrade.com/Video-Guides>

For More in-depth videos and learning Ninjatrade there are additional videos that can be found in Video Library: https://ninjatrade.com/support/helpGuides/nt8/?video_library.htm

Indicators Included with Autotrader: In this section, we cover the indicators and where you can download them if you need them. Also, you will find the manuals and videos for using some of the indicators at this location.

1. **AutoTrend Line:** This indicator can be downloaded here; there is no manual or video on using it. It's a simple indicator that moves with the price action. So you follow the trend.

<https://ln2.sync.com/dl/0b5247e50/5tj7bpt3-vaswgryf-m59gg7kq-46pd8vta>

2. **Crude Open or Open Indicator:** The Link below contains the indicator, and video on 30 tick rule, and manual. There are two videos on using the indicator Open Indicator Video and the Program trading video on how to trade Crude oil and info on the 20/80 rule, and the price ladder. I use this on all futures at the open to measure the support and resistance levels and determine if the trend is up or down when the price is above or below the high or low, very powerful and you should use.

<https://ln2.sync.com/dl/0a3319ab0/h5j7ctiu-j7kagpjr-v2epppkd-2gaezz5n>

3. **Volume Delta Pro Indicator:** In this Link, you will find the manual for the indicator, which is a pdf file. The file is called Volume Delta Pro Manual on how to Setup the indicator and use it. Be sure to review the manual on using the indicator. The indicator is at this Link which ends in zip, Renko bars are also in this Link. There are two videos that explain how to set it up and use it be sure to watch them.

<https://ln4.sync.com/dl/684c33d60/du3h3i99-9jz3xxxh-hb4w3r4e-cc22gjyf>

4. **Fibonacci:** This Link you will find the indicator to download. The fibs manual is in this Link, and there are two videos. The first video is Fib Levels How to, which covers on using the fibs. The second video is Renko bars how-to video. I use this indicator every day to determine where the price is moving and were it can go, the levels are precisely accurate so add it to one of the charts.

<https://ln2.sync.com/dl/2210d1610/byp9z8ek-rvabqfn6-m35ruedv-us3nc78j>

5. **Market Cycle Pro:** At this Link, you will find the indicator and manual to download. This is a new update to the Market Cycle and the labels do not repaint. Go on YouTube and watch some of our videos on the Market Cycle Pro and trading with it, we have some live trades on You Tube with it.

<https://ln4.sync.com/dl/4bc110210/9fz54n3r-cncsuehi-zqifkjk9-uzng75ct>

6. **Renko Bars:** Here you will find the download for the Renko bars indicator, and the manual on using the Renko bars. If you trade with Renko bars, be sure to review the manual and videos at this Link. There is a video covering how to setup the Renko bar. There are different settings for NQ and CL so these settings are very important on using the Renko bars.

<https://ln2.sync.com/dl/fc00e5310/ncrt42ns-stqa5byw-tj4jrab-mhh7bsq3>

7. **Trailing Stops:** In this Link you will find the Link to download the indicator Trading123TrailingStopsN8.zip along with the manual Trading123TrailingStopsManualN8.pdf and the sound files for the indicator are here. They are called T123TrendRevup.wav and T123TrndRevDown. Wav and will have to be installed into Ninjatrader for them to work. The manual contains a link on installing the sound files. The videos cover on how to trade with the indicator and setting it up. The videos end with mp4 first one to watch is the TrailStopHowToStartHere.mp4. Then the second video is TrailingStopSetUpN8. And there are two videos on using the Renko bars. <https://ln2.sync.com/dl/07bf7cb10/yfen7tv4-v5nknrt-4fbiaymp-cw6eqvbt>

8. **TrendLine Indicator:** Here, you will find the indicator Trading123TrendLine.zip to download if you need it. The sound files for the trend alerts are her, and are called T123TrendRevDown.wav and T123TrendRevUp.wav if you downloaded these for any other indicator, there is no need to download them again. The indicators with the sound files all use the same sound file. The manual is called Trading123TrendLineManualN8.pdf so be sure to review it. The video on using the indicator is called TrendLineVideo2A.mp4 so review this for settings and how to trade with it. The other files at the Link are the Renko bars indicator and manuals, and video. Again if you have download these already no need to download them again.

<https://ln2.sync.com/dl/074cc21f0/negfa9rx-j9vyj5ju-2693fd8i-jh3euri9>

9. **SRZones:** At this Link you will find the indicator Trading123ZonesN8.zip to download if you need it. There is no manual for this indicator, all the setup info and using the indicator can be found in these two videos. SRZonesVSetup.mp4 and SRZonesHowToTrade.mp4 will cover all you need to know on using it. There are two other videos in the Link be sure to watch those as we explain Trading with it. The videos are CLZones712V.mp4 and SRZones716A1.mp4, so be sure to watch these also if you're using the indicator.

<https://ln2.sync.com/dl/57268c690/s6gjhn26-dn8ryf7c-wnsq75fu-5mxbyd9x>

10. **Moving Average:** There is no manual for this indicator, and it can be downloaded at the Link below.

<https://ln2.sync.com/dl/b68d7cd40/qmdgsdd6-47rr274z-5ydi4632-zig46puz>

11. **Opening Range Breakout Indicator:** This is a new indicator for 2021 it measures the opening range which is what moves the markets. All the price action is based on the opening range. Learn this indicator as the levels play an important role in trading each day.

Download Link: <https://ln4.sync.com/dl/f9892fff0/icxzbzw8-pzxjdv8m-49m79pk5-fwu3sb3>

12. **Squeeze Indicator:** This is a new indicator released in 11/21 that we had in Esignall and transferred it over to NinjaTrader 8. It measures momentum and volatility and will keep you on the right side of the trend. There is no manual videos explain how to use it, watch them.

Download Link: <https://ln5.sync.com/dl/2b36fb230/etkzineg-ztf8gymf-4qudhcb9-jwjpbgwt>

13. **Trading123 Watermark:** Another new indicator released in 11/21 which plots a watermark on the chart like show on page 12. This is good to use for various reasons, watch the video on it for more info:

Download Link: <https://ln5.sync.com/dl/af8b1f4b0/rcsb73md-ebwymj-svv7qrh3-kvuvpnw6>

Notes: None of the indicators are needed to run the Autotrader. **VERY IMPORTANT:** I may have covered this already, but if you're using the Autotrader do not load the chart up with 3 to 4 indicators. This will use up computer resources, and you may get a crash of the NinjaTrader platform or it may lock up. If this happens, you will have to restart the computer. And put the indicators on separate chart, now if you have 16 or 32 MB of memory this may not be an issue, but it a known problem with Ninjatrade and they suggest loading the indicators on a separate chart, and have Strategy on its own chart. Now I have used one indicator and the Strategy without issues, but everyone's computer is configured differently, you need a good graphic card to handle the graphics on the charts.

27.Trading Wrap Up: The more you use the Software, the better results you should have. Now I can show 100 pages of trade examples and how the Software works. It's now up to you to go out and learn the Software. See how it works, see the trade examples, and use your knowledge of the market and turn on your brain, as the Software does one part of the work. Your brain has to react to the Software and market patterns. The info in this manual on how to trade the Software, and make the trades. Traders are in control of their profits.

Chart Notes: Any text on the chart or graphics like arrows are drawn in by me to pinpoint an area and are not part of the Software. An example would be page 15, and any other pages. I have to identify this as someone requested a refund once, as he assumed that the yellow text and arrows were part of the Software. All times for the Strategy and on the charts our **Eastern Time Zone**.

You have to learn to be a **disciplined trader**; you have to be good at decision making. Decision making is made up of four steps. Collecting information that means analyzing the charts, deciding which way the market is going to go, and implementing a trade. The faster you can do these four steps, the more efficient you are, the better trader you will be. You have to be continually thinking of the next move, where is it going to go?

The Autotrader is a tool that automates many aspects of Trading, such as entering trades automatically based on an algorithm, volume, patterns, setting profit targets, stops, daily profit goals. There's are no guarantees you will achieve the same results as shown in any videos or any charts and performance shown in our videos or on our web site or Twitter and Facebook pages. The Autotrader is not something you want to run 24/7 it was not designed for that. It should just for you to run it and set of goal of \$200 to \$500 a day depending on how many contracts you trade. After you use the software for a good 6 to 9 months then you can focus on larger goals.

And don't try to duplicate my daily goals of 1k to 2k. You need to learn the software and markets and timing methods, and then you can up your goals. \$200 a day is \$1000 a week which is \$4000 a month, that is more than enough to start trading. I

Trading is not a get rich quick theme, it takes a lot of effort and time to learn to trade. You can't just rush into it you have to take the time to learn the fundamentals, the charts, NinjaTrader and the Software. You have to stay focused on Trading and learn as much as you can. You have to have a trader's mindset that is focused on learning each day, learning more than other traders, learning why this trade worked and the other. Have the mindset to learn to read the market and the trend is the most important aspect on Trading. And that's where market timing comes in, you need to dive into this material to learn like I did to trade each day and be successful. Dive into the videos and manuals and learn every aspect of Trading. As it's all-important and will all come together like a puzzle and you will understand it all. But it does take time. First year I started with the autotrader I was happy making \$200 a day. Then I got better at reading the market knowing when to trade and my goal went up the 2nd year to \$300 to \$400 a day. After the third year I was making \$500 a day with the autotrader and was quite happy with that. So, it does take time to learn, some with more trading experience will learn faster others it may take more time. But everything you need to know about Trading is right here in the manuals and videos. A trader's success will be based on their ability to educate themselves, test, and verify and use our Software based on your own observations. There are no guarantees in Trading, the market is always changing each day being driven by news or world events, and you have to be aware of the news each day.

That's all the files for N8; any questions let me know. Be sure to follow our trades on Facebook, and twitter and videos on YouTube. And sign up for our push alerts at our main web site. The videos and manuals contain important info on how the markets work and how we trade it, so take your time to learn it, and get a notebook and take notes. Even though some videos or manuals may be a year old the principles still work today and are very powerful. I learned about the 20/80 rule over 15 years ago, and it still works today. From time to time, I may add new videos, so if you see something with a 2020 date in one of the links, then it's new.

- Now you should plan on spending a good two to four weeks to learn the Software and test it out in the live markets. As there could be issues with your internet or computer

that you never imagined would happen but will happen. From your charts freezing up in NinjaTrader as you don't have enough memory, or losing internet connection or even power during a storm. That's one thing you never want to do is trade during any storm, especially if it's lighting out. Shut the computer off and come back another day.

- You should get a notebook and take note of all this new information. And take notes when your Trading each day. Take screenshots of your good trades and bad trades and study them later to learn what worked and what didn't. Like Trading during a fed meeting. There are so many traders that have no clue when a fed meeting is going on.
- Now some of the links will have the individual indicator files; if you installed the group file of the indicators, there is no need to download these once again. They are here just in case the file goes corrupt, and you need to download the individual file, or you got another computer and want to install the file.
- When a pilot goes to school, they fly in a simulator for over eight weeks and learn every aspect of operating the plane. They do this, so they don't risk lives flying in a real one. You are just like a pilot but you're a trader so trade-in sim until you fully understand everything and how each day the market works, when to trade, and not before you risk your real money.

28. Market Timing Seminar: These are some videos of the seminars I do on a monthly basis. I discuss the days trades and how they worked and what I'm doing so be sure to watch these to learn, as it could be one thing that could improve your Trading. Everyone should watch these videos as it's a complete guide to Trading and how to use the Autotrader

<https://ln2.sync.com/dl/8b7c84e00/eha8ybhg-upkysuy4-t83m93mf-ufhusrvy>

This Link below are three other seminars I did talking about the day's trades, what I did, how I did it. Why the trades worked, so insight to what I do each day in running the Autotrader, so be sure to watch these also. I cove the trades I did on Monday, Tuesday and Wednesday everything explains and easy to follow.

Be sure to watch the seminar on the Ambush Move and learn that and use that in your Trading as it is powerful.

<https://ln2.sync.com/dl/4a6180fd0/igsds7bc-b8pfgvc4-r2j28hxa-8uvyjkmm>

29. Trading SIM to Live: You should trade in SIM for 2-4 weeks to learn the Software and the timing patterns. As you don't want to make any mistakes with real money, so we suggest SIM trading to practice on what you are learning. When you set up the Strategy under the parameters, there is a parameter called Setup. It's at the bottom of the strategy properties. And it says the account, so you start off with SIM101 selected or whatever your sim account name is.

To go Live with your trading account, you have to click in the account setting and select your broker account for the Strategy to trade it live. As is the past, others have switched the account when chart trader is there from SIM to Live account and found it traded their SIM account. So, you can't change it with chart trader it must be changed in the strategy properties as I said, then enable the Strategy and its ready.

30. CPU Monitoring Software: Traders I have been using this Software for about nine months that helps with real-time CPU optimization and automation with optimal performance for real-time applications. So basically, keeps your computer running smoothly, and especially if you have an older computer.

It's a free download; they give you a trial to test it. Then after the trial is over, they offer 25% off coupon. You can get unlimited PC use in the same house for around \$35 and a single pc license for \$25. So, it's well worth it to keep NinjaTrader running smoothly and your computer.

Check it out at Link below I use this Software to monitor CPU usage and memory, they have a Free download.
